BUILD EXCLUSIVE GAMES FOR YOUR CASINO

Engage players with localized games & set your casino brand apart

WHAT IS FIREBALL?

Fireball is a Remote Gaming Server (RGS), the backend system that hosts online casino games, manages their logic, player authentication, and transactions, and handles mathematical models and random number generation.

WHAT PROBLEMS DOES FIREBALL SOLVE?

First of all, running your own RGS is not a walk in the park; it's a long, complicated, and expensive process, with technical, compliance, and maintenance considerations.
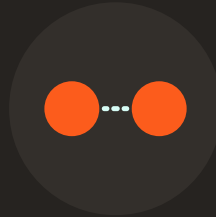

OPERATORS STRUGGLE TO STAND OUT

Players look at the same games on different casinos.

How can you make your casino stand out?

THERE'S TOO MUCH IDENTICAL GAME CONTENT

Everyone offers the same classic game titles - you, and your competitors.

EXCLUSIVE GAMES TAKE TOO LONG, COST TOO MUCH

Custom development is expensive & inefficient, and returns are not guaranteed.

YOU CAN'T COMPETE ON VERY MUCH

No fresh content leads to lower player retention. You can only compete on offers or bonuses, which cost you money.

FIREBALL IN ACTION – CASE STUDY

"At Vinder Casino Studios, we were very satisfied with the development of our games, *Guldjagt* and *Janni på den Røde Løber*.

These titles have given us a unique edge in the market, helping us attract new players and run exclusive campaigns that are unavailable to competitors to ours. The integration process with Fireball was direct and seamless, and since launching the games, we've experienced zero downtime.

Fireball has proven to be a reliable, innovative platform that we can trust to support our business goals.
